

Domestic Project Implementation Schedule:

Plan ahead. This Implementation Schedule is an estimation of when you can expect to start production after you've purchased your mold and equipment package. We make every effort to have everything ready to ship between 16 to 20 weeks but schedules vary depending on the size of factory you purchase, how many orders we have at any given time, and the length of time it takes the shipment to arrive your factory. Most domestic shipments shouldn't take more than a week to 10 days to arrive.
